

OBSERVATIONS OF PLANETARY MOVEMENT CAUSING EARTHQUAKES

1. Jupiter in Taurus or Scorpio and having aspect/conjunction of Mercury causes frequent earthquakes.
2. Concentration of planets at the beginning of movable signs - Aries, Cancer, Libra and Capricorn.
3. Placement of Moon and Mercury in the same nakshatra.
4. Earthquakes normally follow close on the heels of eclipses and especially in the countries where eclipses occur in the tenth or the fourth house.
5. An eclipse may be forerunner of earthquake, but earthquakes will not happen unless there are many aspects with the eclipse.
6. Taurus and Scorpio signs are notorious for earthquakes especially when Saturn, Rahu, Mars and Jupiter are in the signs.
7. Major planets (Jupiter and Saturn) changing the directions from direct to retrogression or retracted to direct and having excessive speed can cause Earthquakes.
8. Sun and Moon opposing or joining or squaring each other and moon joins or opposing the planet which is changing the direction.
9. Major Planets having maximum declination wrt Earth recorded.
10. Full Moon, New Moon, Moon at perigee or maximum declination activating the point of Major Planet's stress influence.
11. The position of planets at each Ingress of Sun into Aries, Cancer, Libra and Capricorn and at the time of new Moon should be observed.
12. Major planets in kendras or trikonas from each other contribute to occurrence of earthquake.
